

Factory Simulation Report

Generated: March 09, 2026 at 22:39:47

Key Performance Indicators

Products Completed	Quality Pass Rate	Avg Cycle Time	Worker Utilization
92	93.9%	6.57	10.2%

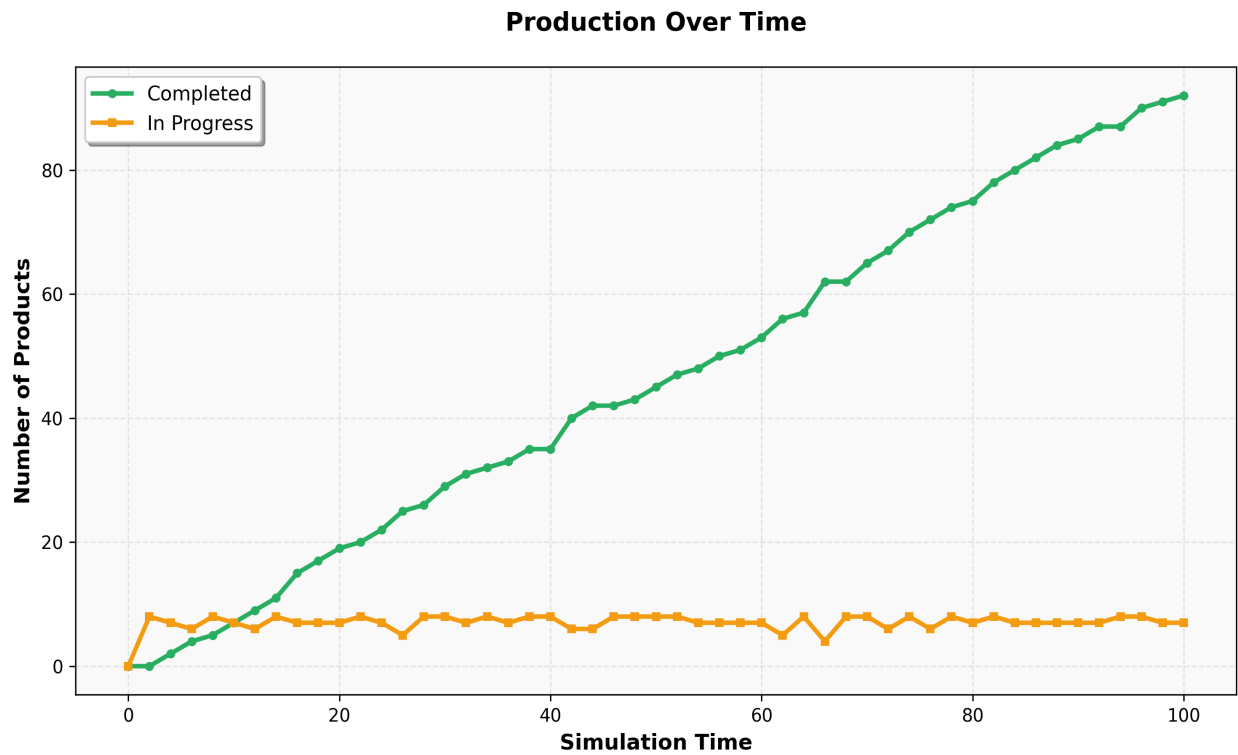

Simulation Configuration

Parameter	Value
Simulation Duration	100.0
Production Lines	8
Machines	5
Workers	10
Materials per Product	5
Defect Rate	5.0%
Raw Material Capacity	1000
Finished Goods Capacity	500

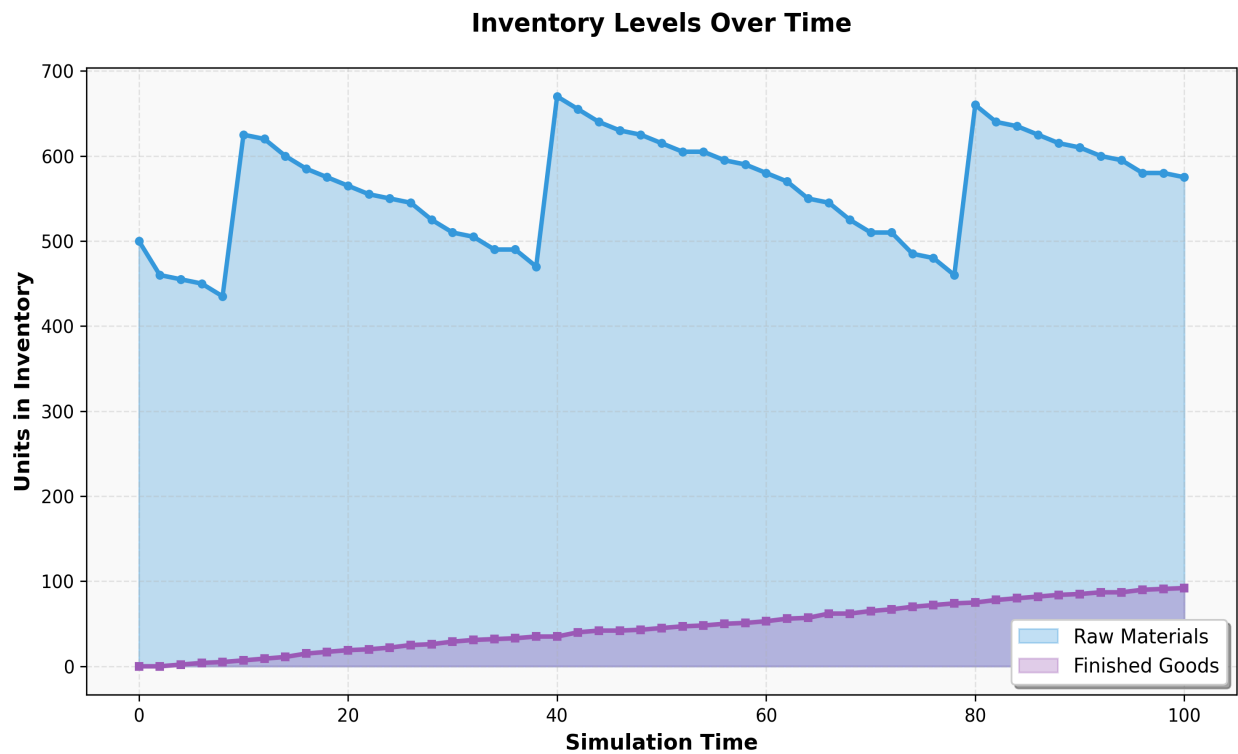

Key Insights

- Successfully completed 92 products during the simulation.
- Quality performance at 93.9% - consider process improvements.
- Worker utilization is low at 10.2% - consider reducing workforce or increasing production.

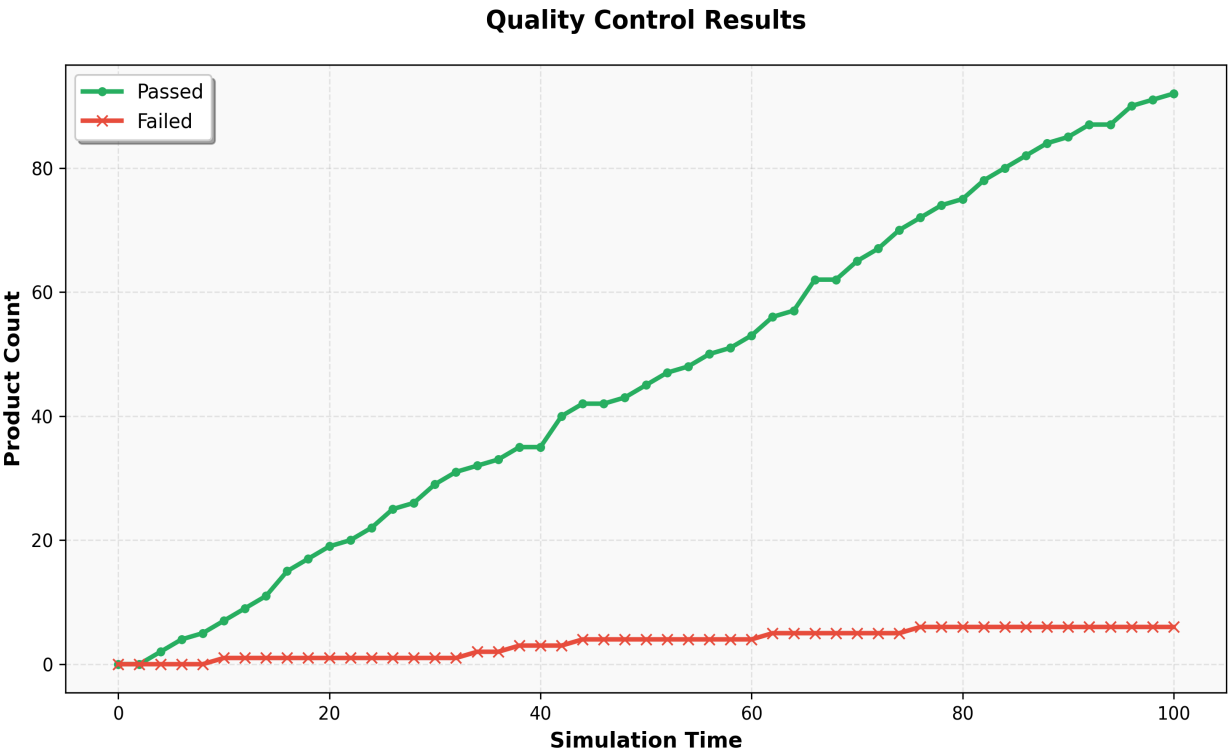

Production Analysis

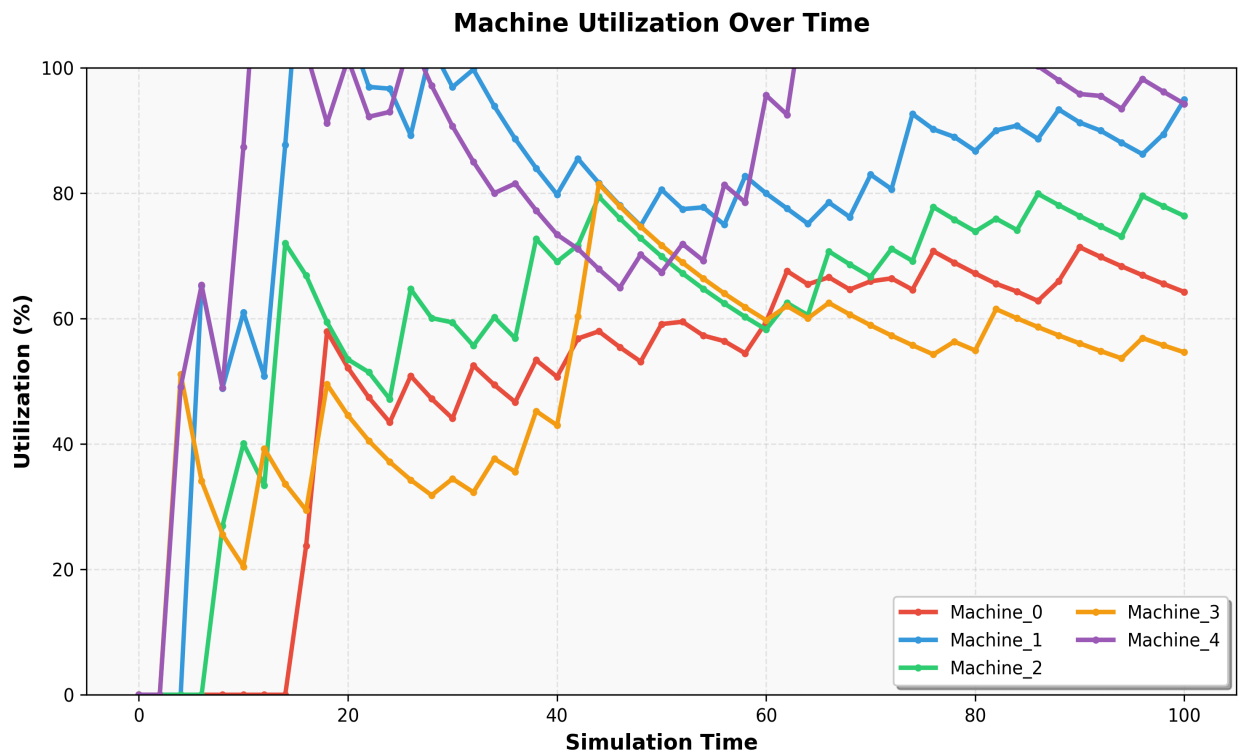

Inventory Management

Quality Control

Machine Utilization

Detailed Statistics

Final Metrics Summary

Metric	Value
Total Products Completed	92
Products Passed Quality	92
Products Failed Quality	6
Quality Pass Rate	93.88%
Average Cycle Time	6.57
Worker Utilization	10.23%
Final Raw Materials	575 units
Final Finished Goods	92 units

Machine Performance Breakdown

Machine	Final Util (%)	Avg Util (%)	Peak Util (%)
Machine_0	64.3%	49.5%	71.4%
Machine_1	94.9%	80.8%	129.6%
Machine_2	76.4%	60.7%	79.9%
Machine_3	54.6%	49.8%	81.5%
Machine_4	94.3%	87.3%	133.2%
